

Project Title

RecruitFlow – Campus Placement & Talent Management System

Academic Details

Section: 05

Academic Year: 2025–2026

Course: Data Structures & Algorithms

Problem Statement

Manual campus placement management leads to inefficiencies, errors, and delays. RecruitFlow automates student eligibility checks, company drives, shortlisting, and interview scheduling using Data Structures.

Objectives

- Automate placement workflow
- Efficient student & company data management
- Apply DSA concepts practically

Target Users

Placement Cell Officers

Students

Recruiting Companies

System Modules

- Student Management
- Company & Drive Management
- Applications & Shortlisting
- Interview Scheduling

Data Structures Used

Arrays – Fixed student/company storage

Linked List – Applicant tracking

Stack – Undo shortlist actions

Queue – Interview scheduling

Priority Queue – Top candidates
HashMap – Fast student search

Technology Stack

Language: Java
Platform: Console Application
IDE: Eclipse / IntelliJ

Advantages

- Efficient processing
- Reduced errors
- Real-time data handling

Conclusion

RecruitFlow demonstrates the practical implementation of Data Structures to solve real-world campus placement problems effectively.
